RE: Recommendation for professional engineering services

Forensic investigation of building failure due to slope erosion

Mr. Jennings,

I wanted to take a moment to thank you for your recent services to our firm in the way of forensic investigation of a failing building on the island of O`Ahu. Specifically, your work for us included:

- Scope: onsite investigation requiring photos and narrative of causal factors for CMU building failure as a result of slope scour/failure
- Timeliness: when we originally contacted you, we caught you on another assignment on the mainland. But, upon your return to Hawaii you met with our client on a weekend and immediately worked on completing the report for us.
- Thoroughness: your documentation and reporting were very thorough and provided us with a complete standalone document from which the carrier should be able to determine their liability within the limits of the policy

Again, thank you for your assistance on this project and I am happy to speak about your professional services to any other potential clients.

Warmest Regards,

Daniel Price
Principal
